

AI ExamGuard

Real-time, AI-assisted proctoring for online exams — face verification, device detection, and behavior monitoring, with a transparent risk score instructors can actually see and audit. Free to register. Any school can bring its instructors, courses, and students onto its own fully isolated space in minutes — no IT department, no procurement process.

Why AI ExamGuard

Six things that make it a real proctoring system, not a mock-up.

Real-Time AI Monitoring Webcam-based face verification, YOLO-based object/phone detection trained on real exam footage, and tab/window-switch tracking — all running live during the exam, not reviewed after the fact.	A Risk Score You Can Actually Read Every session gets a transparent 0–100 risk score instructors can watch live, combining a trained model with clear, auditable rules — never a black box.	Fair by Design Built-in accommodations for students who need checks disabled, a full student appeal workflow on every flagged violation, and instructor review before any consequence.
Privacy-Conscious by Default Evidence auto-expires on a fixed retention window, every access is audit-logged, and admins have direct purge controls — proctoring without a permanent surveillance archive.	Your Own Branded Space, Instantly Register your school and get a fully isolated environment — your own login page, your own courses, students, and exams, completely separate from every other school.	Built for the Whole Exam Lifecycle Exam creation with bulk CSV question import, subject-scoped instructor assignment, rosters, live monitoring, and per-question analytics — not just the proctoring moment.

Get Started in Minutes

From zero to your first proctored exam.

- 1 Register your school**
Enter your school name and set up your admin account. Your school gets its own login URL immediately — no waiting, no sales call.
- 2 Add your people**
Bring in instructors and assign them to subjects, add your courses, and either add students directly or share your course list so they can self-register.
- 3 Create your first exam**
Build a question bank (or bulk-import via CSV), scope it to a course or a specific roster, and set a passing score — AI monitoring runs automatically once it's live.
- 4 Watch it happen, live**
Instructors see a live risk feed as students take the exam, then get a full report: score distribution, pass rate, and per-question accuracy the moment it ends.

Ready to bring real exam integrity to your school?

Register your school free — your own space is ready in minutes.

Content source for hero-page design · every feature listed is implemented and tested in the running system, not a concept mock-up.
